Portfolio: raul-gomero-tech.vercel.app • GitHub: github.com/rsg28

PROFESSIONAL SUMMARY

IT Support–focused Computing Science graduate (Simon Fraser University) with hands-on experience troubleshooting production systems, supporting end users, and coordinating with clients, teams, and stakeholders across Windows, Linux, and cloud environments. Strong PC hardware and virtualization skills backed by CompTIA A+ Core 1 study, custom desktop configuration, and years of informal device support. Trilingual (English, French, Spanish), comfortable with ticket workflows, Git/GitHub, clear customer communication, and reliable documentation.

TECHNICAL SKILLS

Support & Service: Ticket triage (Jira), user account and access management, password resets, incident documentation, escalation, onboarding-style device and account setup, plain-language communication with non-technical users

Systems & Virtualization: Windows 10/11, Linux, VMware, VirtualBox (VM creation, snapshots, guest OS setup), Microsoft 365 / Office, Active Directory concepts, DNS, TCP/IP basics, AWS (EC2, S3, Route 53), Docker

Hardware & Devices: Desktop/laptop configuration and upgrades, PC components (CPU, GPU, RAM, storage, PSU, cooling), BIOS/UEFI, peripherals, printers, consoles and consumer electronics setup

Tools & Development: Git, GitHub (repositories, branches, pull requests, code review), Python, JavaScript, Java, SQL, C++, React, Node.js

PROFESSIONAL EXPERIENCE

Full Stack Developer / Technical Support | TuSalud *Jan 2026 – Aug 2026*

- Provided day-to-day technical support for staff, supervisors, and administrators across multiple client work sites, resolving login, access, and application issues.
- Managed user accounts with role-based permissions and coordinated onboarding-style access changes for multi-site teams.
- Troubleshot production AWS issues, including real-time sync failures, and restored service under time pressure while keeping stakeholders informed.
- Logged, prioritized, and tracked incidents in Jira with clear technical notes and follow-up through resolution.
- Maintained application data and support documentation used across client sites.

Freelance Mobile Developer / Application Support | SecuApp *Feb 2026 – Aug 2026*

- Supported end users with login, account access, and application questions on an AWS-hosted mobile system.
- Diagnosed Excel export and reporting failures across different data scenarios and delivered technical fixes quickly.
- Coordinated directly with the client to clarify requirements and communicate resolution updates.
- Documented recurring issues and solutions to speed up future support and reduce repeat tickets.

Freelance Web Developer / Client Support | El Contador EC *Mar 2025 – Jul 2025*

- Deployed and managed AWS hosting (EC2, Route 53, S3); troubleshot DNS and configuration issues.
- Built and maintained an admin portal with authentication and user-account management; resolved access problems directly with the client.
- Handled Windows-style user access workflows and permission changes for client staff.
- Communicated technical decisions and trade-offs clearly during client meetings.

Software Engineer | Grupo FJ *Jan 2025 – May 2025*

- Launched and supported corporate websites; verified cross-browser behavior and fixed post-launch technical issues.
- Coordinated with design and marketing stakeholders to clarify requirements and communicate constraints under fixed timelines.
- Supported release readiness checks and post-launch adjustments.

Software Developer | SFU Surge *Jan 2023 – May 2024*

- Built and supported the StormHacks 2024 registration platform for 500+ attendees; load-tested the sign-up flow before peak traffic.
- Provided account and authentication support for event users and verified edge cases before go-live.
- Tracked work in Agile sprints using GitHub reviews and Jira/Notion.

PROJECTS & TECHNICAL PRACTICE

GANPI | 1st Place, StormHacks 2025 *Oct 2025*

- Built a C++ tool that converts natural language into safe shell commands, with checks for unsafe actions.
- Resolved integration and performance issues under time pressure and delivered a stable demo using Git/GitHub workflows.
- Coordinated team collaboration and documentation throughout the event.

Desktop PC Configuration & Upgrade | Personal Hardware Lab *2026*

- Configured and upgraded a high-performance Windows 11 Pro desktop (Intel Core Ultra 7 265KF, GeForce RTX 5060 Ti, 32GB RAM, 2TB SSD, Wi-Fi 7 / Bluetooth 5.4).
- Installed drivers, tuned BIOS and OS settings, and verified storage, thermals, networking, and peripheral functionality.
- Practiced PC hardware and software diagnostics aligned with CompTIA A+ Core 1 study.

Informal Device & Software Support | Family and Friends *Ongoing*

- Provided software-level PC troubleshooting: operating system issues, updates, malware cleanup, driver problems, and application setup.
- Installed and configured printers, TVs, gaming consoles (PlayStation), and related peripherals for non-technical users.
- Explained fixes in plain language and built strong customer-service habits in real support situations.

EDUCATION & CERTIFICATIONS

Bachelor of Applied Science in Computing Science | Simon Fraser University, Burnaby, BC *Sep 2020 – Jun 2025*

Coursework in computer hardware fundamentals, operating systems, networking basics, virtualization concepts, and diagnosing failures through labs and projects.

CompTIA A+ | In progress (Core 1: 220-1201) — PC hardware, troubleshooting, networking fundamentals

LANGUAGES

English: Fluent (professional working proficiency)

French: Fluent (professional working proficiency)

Spanish: Native proficiency
